### **DETAILED ACTION**

1. This action is responsive to the Applicant's filed RCE including submission of post-allowance IDS as per 9/11/2012.

As indicated in Applicant's response, no claims have been amended. Claims 1, 5-11, 15-21 are re-submitted for an Office action, pending prosecution of the above IDS

### ***EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE***

2. Claims 1, 5-11, 15-21 are allowed.

The following is an examiner's statement of reasons for allowance.

A) The prior art presented with the IDS per 9/11/2012 has been considered and none has been identified as new found reference that would reverse the case's patentable state in terms of the claimed subject matter, and this in reference to the Office Allowance action filed per 8/31/12; which was the result of the rendered BPAI decision recorded per 8/20/12.

B) That is, none of the prior art being considered in said IDS, is deemed sufficient, taken separately or jointly, to anticipate or render obvious the following subject matter being concluded as allowable per the above Office Action allowance.

*Method of cell-based data processing that facilitates the execution of computer programming code by a computer system, the method comprising:*

*receiving as input computer code a data processing specification comprising a plurality of cells, wherein each cell comprises a formula specifying an action or computation to perform when the cell is executed, and one or more attributes referencing other cells, wherein the formula of a first cell may reference a value of a second cell;*

*wherein each cell is delineated by a beginning and ending tag, and one of the cells is reserved as an output cell for outputting a result of the processing;*

*parsing the specification to determine an interdependency of the plurality of cells and generating and storing a directed graph of the interdependency as an execution flow; and*

Art Unit: 2193

*executing the computer code of the specification in accordance with the execution flow, wherein the executing comprises evaluating the formula of each cell in the execution flow and generating an output result; wherein each cell is interlocked with at least one other cell through the formula or attribute of each cell.*

(as per claims 1, 11, 21 from the original set of claims prior to the Allowance)

Following are examples of prior art that come close but fail to render obvious the above claimed invention.

**Draper et al**, 6,581,062, discloses template for representing XML schema, each template acting as a mapper and including commands such as select, value-of, apply; but does not teach the execution flow being parsed to derive dependency of data between first and second cell in relation to one formula whose dependent output from first cell is interlocked with flow of the second cell (as in claims 1, 11, 21)

**Di Fabrizio et al**, 7,203,866, also teach undoable structured language representation reminiscent of template mapper, having “value-of select” tagged commands typical in XSLT depicting of XPath in representation of XML; but as with Draper, Fabrizio fails to teach or render obvious the output dependency from first cell to second cell with respect to formula resulting in flow dependency interlocking the cells as from above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
